WORK EXPERIENCE

Software Engineer

Plinthsol pvt.Ltd Bahria town Lahore

(14-September-24 to 05-May-2026)

- Full Stack web developer design and build complete web applications using monolithic and microservices architecture. I handle frontend and backend development, containerize applications using Docker, Api communication between services and deploy them on servers using Git-based CI/CD pipelines to ensure reliable and automated releases.
- Maintain database, update and extract data information from the database according to the required information.
- Experienced with Google Cloud Platform (GCP) for deploying, scaling, and managing cloud infrastructure. Implement secure authentication and authorization using JWT and OAuth, and integrate Stripe for payment processing, subscriptions, and billing workflows.
- Web & Mobile Automation: Proficient in creating sophisticated scraping and automation scripts using Selenium, Puppeteer, and Appium.
- Designed and developed an AI-powered model that reads structured data and automatically generates scripts based on the underlying data schema.
- Scripting & Development: Pythons and Bash scripting for custom workflows, API development, and e-commerce store creation.
- Data Engineering: Skilled in data cleanup and end-to-end ETL processes, with a strong focus on building scalable data solutions and optimizing pipelines to enhance business intelligence and drive informed decision-making.
- WordPress & SEO: Implement custom website designs and themes using WordPress, while optimizing for search engines (SEO) to enhance visibility, improve user experience, and drive organic traffic. On page seo, Off page seo, Technical seo, Local seo and Content seo.
